Plant science continues to play a pivotal role in addressing some of the most pressing challenges of our time—ensuring food security, combating climate change, preserving biodiversity, and developing sustainable agricultural practices. As the global community seeks innovative and interdisciplinary solutions, the rapid dissemination of scientific knowledge becomes more critical than ever.

This open access journal is committed to publishing high-quality research in all areas of plant science, including but not limited to plant physiology, molecular biology, genetics, biotechnology, taxonomy, ecology, and agronomy. By adopting an open access model, we ensure that valuable scientific discoveries are accessible to researchers, educators, policymakers, and the public without barriers.

We encourage submissions that are methodologically sound, conceptually novel, and socially relevant. Our editorial board comprises leading experts dedicated to maintaining rigorous peer-review standards and upholding the integrity of scholarly communication. In doing so, we aim to provide a dynamic platform for both established and early-career researchers to share insights and contribute to the global advancement of plant sciences.

Together, let us foster an inclusive, transparent, and collaborative scientific community that empowers innovation and knowledge sharing in plant science across the world.
